

REMARKS

Claims 1, 4-8 and 26-34 are pending in the application. Claims 1 and 4-8 have been amended. Claims 2, 3 and 9-25 have been canceled. Claims 26-34 have been newly added. Reconsideration of the rejection and allowance of the pending application in view of the following remarks are respectfully requested.

As an initial matter, Applicants wish to bring to the Examiner's attention the fact that Applicants claim the right of priority granted pursuant to 35 U.S.C. § 119 based upon Japanese Application No. 2000-340741, filed November 8, 2000. A certified copy of the Japanese application was submitted with the present application on November 6, 2001 and the claim for priority has been scanned into the electronic file wrapper, according to the U.S. Patent and Trademark Office's PAIR system. Applicants note that the Examiner has not acknowledged Applicants' claim for foreign priority, or receipt of the certified copy of the priority document. Applicants respectfully request that the Examiner acknowledge Applicants' claim for foreign priority and receipt of the certified copy of the priority document in the next official communication. If the Examiner so requests, Applicants can forward to the Examiner a copy of the certified copy of the priority document and a copy of the filing receipt evidencing Applicants' prior submission of the certified copy of the priority document.

As another matter, the Examiner attached to the Office Action of June 3, 2005 copies of the PTO-1449 Forms submitted with the Information Disclosure Statements (IDSs) filed by Applicants on February 6, 2002, and January 3, 2005. On the PTO-1449 Form submitted on February 6, 2002, the Examiner indicated that he had not considered the Japanese language documents listed on the PTO-1449 Form (namely,

JP 9-171450, JP 9-288683, JP 11-143900, JP 2000-132559, and JP 2000-132618) because there were no English language translations. However, the Examiner indicated that he had considered the English language abstracts of the above noted Japanese patent documents.

Similarly, on the PTO-1449 Form submitted on January 3, 2005, the Examiner indicated that he had not considered the Korean language documents listed on the PTO-1449 Form (namely, 2000-49934 and 2000-17788) because there were no English language translations. However, the Examiner indicated that he had considered the English language abstracts of these Korean patent documents.

Subsection III(A)(3) of section 609 of the M.P.E.P. provides that each information disclosure statement must include a concise explanation of the relevance of information listed that is not in the English language. It further provides that submission of an English language abstract of a reference fulfills the requirement for a concise explanation.

Subsection III(C)(2) of section 609 of the M.P.E.P. provides that information which is in a non-English language and which complies with these requirements will be considered in view of the concise explanation submitted and insofar as it is understood on its face, e.g., drawings, chemical formulas, in the same manner that non-English language information in Office search files is considered by examiners in conducting searches. The examiner will indicate that the non-English language information has been considered in the same manner as consideration is indicated for information submitted in English. The examiner should not require that a translation be filed by applicant. The examiner should not make any comment such as that the non-English

language information has only been considered to the extent understood, since this fact is inherent.

Subsection III(C)(2) of section 609 of the M.P.E.P. further provides that if an item of information in an IDS fails to comply with requirements of 37 C.F.R. 1.97 and 37 C.F.R. 1.98, a line should be drawn through the citation to show that it has not been considered, and that **the other items of information listed that do comply with the requirements of 37 C.F.R. 1.97 and 37 C.F.R. 1.98 will be considered by the examiner and will be appropriately initialed.**

Based upon the above, Applicants respectfully submit that they complied with all the requirements for the submission of material to be considered by the Examiner, and that the Examiner is required to initial the appropriate spaces next to the listings of the Japanese and Korean language documents listed on the PTO-1449 Forms submitted on February 6, 2002 and January 3, 2005. As noted above, English language abstracts of each of the Japanese and Korean language documents were submitted. Thus, Applicants submit that they have complied with the requirements of a concise explanation of the relevance of all information listed that is not in the English language. Accordingly, Applicants respectfully request that the Examiner remove the lines drawn through the Japanese and Korean language documents citations, initial the appropriate spaces to indicate his consideration of these patents in view of the concise explanations submitted and insofar as they are understood on their faces, and provide copies of the PTO-1449 Forms to Applicants with the next official communication.

Applicants note that the Examiner has made the Restriction Requirement of March 18, 2005 final, thus withdrawing claims 9-25 from consideration. However,

Applicants thank the Examiner for withdrawing the Restriction Requirement to the extent that he has considered claim 8 with the group of claims 6 and 7. By the current amendment, Applicants cancel, without prejudice, withdrawn claims 9-25. However, Applicants expressly reserve the right to submit similar type claims in another application.

In the Office Action, the Examiner rejected claims 1-8 under 35 U.S.C. § 112, 2nd paragraph as being indefinite for failing to particularly point out and distinctly claim the subject matter which Applicants regard as the invention. The Examiner stated that the claims were generally narrative and indefinite, failing to conform to current U.S. practice.

By the present amendment, Applicants have amended claims 1 and 4-8, and have canceled claims 2 and 3, paying particular attention to the concerns raised by the Examiner. Applicants respectfully submit that claims 1 and 4-8 as currently amended comply with the requirements of 35 U.S.C. § 112, 2nd paragraph, and therefore respectfully request withdrawal of this ground of rejection.

In the Office Action, the Examiner also rejected claims 1-3 and 6-8 under 35 U.S.C. §103(a) as being unpatentable over Burge et al. (U.S. Patent No. 6,014,638) in view of Bellovin et al. (U.S. Patent Application Publication No. 2001/0056409). Applicants respectfully traverse this ground of rejection for at least the following reasons.

The present invention is directed towards an e-commerce system. The e-commerce system of the present invention includes, inter alia, a merchandise information distribution unit, and a plurality of consumer terminals. The merchandise

information distribution unit includes a merchandise information storage section that stores merchandise information provided from a seller, and a merchandise information server that distributes the merchandise information from the merchandise information storage section to a consumer.

Each consumer terminal includes a storage section that stores a personal profile in which various keywords contained in the merchandise information and evaluation values corresponding to the keywords are registered. The evaluation values are learned in advance based on a preference of a consumer. Each consumer terminal also includes an information filtering section that ranks the merchandise information distributed from the merchandise information server to match the preference of the consumer, based on the personal profile.

A first consumer terminal of the plurality of consumer terminals is configured to transfer distributed merchandise information to an information filtering section of a second consumer terminal. The information filtering section of the second consumer terminal ranks the transferred distributed merchandise information based on a personal profile stored in a storage section of the second consumer terminal (which may be, but is not limited to, for example, the profile of a celebrity that uses the second consumer terminal). The first consumer terminal is configured to place an order for merchandise using the merchandise information ranked by the second consumer terminal.

Burge is directed to a system for customizing computer displays in accordance with user preferences. Burge discloses that the system includes a shopper's computer 80, and an electronic shopping manager 84 which processes user selection data to develop preference profile data as the shopper navigates through a shopping

environment. See Figure 1, col. 4, lines 30-47 and col. 6, lines 49-53. Profile data for the shopper is stored in a User Profile Database 18. See col. 7, lines 1-2. However, Burge does not disclose that the User Profile Database is stored in the shopper's computer 80.

Burge also fails to disclose that the shopper's computer 80 includes an information filtering section that ranks merchandise information distributed from a merchandise information server to match the preference of the shopper, based on the profile data. Instead, Burge discloses a Browse/Purchase process of the electronic shopping manager 84 process that uses selection data to develop preference profile data as a user navigates through a shopping environment, collecting data such as the store visited, length of visit, and merchandise viewed and purchased by a shopper. See col. 6, lines 50-67. Applicants submit that, Burge fails to disclose that a shopper's computer 80 includes an information filtering section that ranks merchandise information based on this preference profile data.

Another distinction between the present invention and Burge is that, according to the present invention, a first consumer terminal is configured to transfer distributed merchandise information to an information filtering section of the second consumer terminal. The information filtering section of the second consumer terminal ranks the transferred distributed merchandise information based on a personal profile stored in the second consumer terminal, and the first consumer terminal is configured to place an order for merchandise using the merchandise information ranked by the second consumer terminal. Applicants respectfully submit that Burge does not disclose this interaction between consumer terminals.

On page 8 of the Office Action of June 3, 2005, in his rejection of claims 2 and 3, the Examiner acknowledged that Burge does not disclose these features, but asserted that these features are intended use and functional limitations, and that Burge's information distribution unit is capable of implementing the claimed intended uses and functions. The Examiner cited the case of In re Schreiber, 128 F.3d 1473, 1477-78, 44 USPQ2d 1429, 1431-32 (Fed. Cir. 1997) (with respect to his 35 U.S.C. § 112, 2nd paragraph rejection) to rely on the proposition that "claims directed to an apparatus must be distinguished from the prior art in terms of structure rather than function." Applicants respectfully submit that this statement has been taken out of context.

For the Examiner's convenience, Applicants attach hereto a copy of In re Schreiber. In In re Schreiber, the Court of Appeals for the Federal Circuit reaffirmed the case of In re Swinehart, 439 F.2d 210, 212, 169 USPQ2d 226, 228 (CCPA 1971), declaring that "[a] patent applicant is free to recite features of an apparatus either structurally or functionally". See In re Schreiber at 1432. The court went on to state that "where the Patent Office has reason to believe that a functional limitation asserted to be critical for establishing novelty in the claimed subject matter may, in fact, be an *inherent* characteristic of the prior art, it possesses the authority to require the applicant to prove that the subject matter shown to be in the prior art does not possess the characteristic relied on" (emphasis added). Id. Applicants respectfully submit that the Examiner does not have reason to believe that the claimed functions of Applicants' consumer terminals are inherent characteristics of Burge's computers 80.

Applicants respectfully submit that the functions of computing devices are defined by the programs stored in the computing devices. Thus, Applicants submit that

it is erroneous to assert that one computing device anticipates another merely because it is a computing device. Since Burge does not disclose (or even suggest) that his computers 80 are programmed to perform the claimed functions of Applicants' consumer terminals, Applicants submit that these functions are not inherent characteristics of Burge's computers 80.

Bellovin is directed towards a method for facilitating credit card transactions. Applicants respectfully submit that Bellovin fails to disclose or suggest the above-noted shortcomings of Burge.

Thus, Applicants respectfully submit that the combination of Burge and Bellovin asserted by the Examiner fails to disclose or suggest an e-commerce system that includes a plurality of consumer terminals, each having a storage section stores a personal profile in which various keywords contained in merchandise information and evaluation values corresponding to the keywords are registered, and an information filtering section that ranks distributed merchandise information to match a preference of a consumer based on the personal profile, where a first consumer terminal is configured to transfer distributed merchandise information to an information filtering section of a second consumer terminal, the information filtering section of the second consumer terminal ranks the transferred distributed merchandise information based on a personal profile stored in a storage section of the second consumer terminal, and the first consumer terminal is configured to place an order for merchandise using the merchandise information ranked by the second consumer terminal, as recited in independent claim 1. For at least these reasons, Applicants submit that the 35 U.S.C. § 103(a) rejection of independent claim 1 is improper, and request withdrawal of the

rejection.

Dependent claims 6-8 are submitted to be in condition for allowance for at least the same reasons as set forth above with respect to independent claim 1.

The Examiner also rejected claims 4 and 5 under 35 U.S.C. § 103(a) as being unpatentable over Burge in view of Bellovin, and further in view of Toshiki et al. (Japanese Patent Publication No. JP 11-143900). Applicants respectfully traverse the rejection for at least the following reasons.

Applicants respectfully submit that Toshiki fails to disclose or suggest the above-noted shortcomings of the combination of Burge and Bellovin, that is, it fails to disclose or suggest an e-commerce system that includes a plurality of consumer terminals, each having a storage section stores a personal profile in which various keywords contained in merchandise information and evaluation values corresponding to the keywords are registered, and an information filtering section that ranks distributed merchandise information to match a preference of a consumer based on the personal profile, where a first consumer terminal is configured to transfer distributed merchandise information to an information filtering section of a second consumer terminal, the information filtering section of the second consumer terminal ranks the transferred distributed merchandise information based on a personal profile stored in a storage section of the second consumer terminal, and the first consumer terminal is configured to place an order for merchandise using the merchandise information ranked by the second consumer terminal, as recited in independent claim 1.

For at least these reasons, Applicants respectfully submit that independent claim 1 is not obvious in view of the combination of Burge, Bellovin and Toshiki asserted by

the Examiner.

Dependent claims 4 and 5 are also submitted to be in condition for allowance for at least the reasons set forth above with respect to independent claim 1.

Newly added claims 26-29 are directed towards a consumer terminal including, inter alia, a storage section that stores a personal profile in which various keywords contained in merchandise information and evaluation values corresponding to the keywords are registered, and an information filtering section that ranks distributed merchandise information to match a preference of a consumer, based on the personal profile, where the consumer terminal is configured to transfer distributed merchandise information to an information filtering section of another consumer terminal, and place an order for merchandise using merchandise information transferred to the other consumer terminal and ranked by the other consumer terminal using a personal profile stored in the other consumer terminal.

Newly added claims 30-34 are directed towards an e-commerce method which includes, inter alia, storing in a first consumer terminal a personal profile in which various keywords contained in merchandise information and evaluation values corresponding to the keywords are registered, ranking by the first consumer terminal distributed merchandise information to match a preference of a consumer based on the personal profile, transferring distributed merchandise information from the first consumer terminal to a second consumer terminal, ranking by the second consumer terminal the transferred distributed merchandise information based on a personal profile stored in the second consumer terminal, and placing an order by the first consumer terminal for merchandise using the merchandise information ranked by the second

P21671.A06

consumer terminal.

Applicants respectfully submit that these features are not disclosed or suggested by the applied prior art, and request that the Examiner indicate that new claims 26-34 are allowed.

Based on the above, it is respectfully submitted that this application is now in condition for allowance, and a Notice of Allowance is respectfully requested.

SUMMARY AND CONCLUSION

Entry and consideration of the present amendment, reconsideration of the outstanding Office Action, and allowance of the present application and all of the claims therein are respectfully requested and now believed to be appropriate. Applicants have made a sincere effort to place the present invention in condition for allowance and believe that they have now done so.

Any amendments to the claims which have been made in this amendment, and which have not been specifically noted to overcome a rejection based upon the prior art, should be considered to have been made for a purpose unrelated to patentability, and no estoppel should be deemed to attach thereto.

Should the Examiner have any questions or comments regarding this response, or the present application, the Examiner is invited to contact the undersigned at the below-listed telephone number.

Respectfully submitted,
Toshiki KINDO et al.

U.S. Court of Appeals Federal Circuit
44 USPQ2d 1429Decided October 23, 1997
No. 97-1201

Headnotes

PATENTS

1. Patentability/Validity -- Anticipation -- Identity of elements (§ 115.0704)

Prior art patent disclosing conical spout for open-ended containers, which contains all structural limitations recited in application claims for conical dispensing top for popped popcorn, anticipates application claims even though it does not address use of disclosed structure to dispense popcorn, since recitation of new intended use for old product does not make claim to that old product patentable, and since applicant's contention that claimed structure will be used

to dispense popcorn thus does not have patentable weight if structure is already known, regardless of whether it has ever been used in any way in connection with popcorn.

2. Patentability/Validity -- Anticipation -- Prior art (§ 115.0703)

Question whether reference is analogous art is irrelevant to whether that reference anticipates claimed invention; reference may be from entirely different field of endeavor from that of inventor, yet reference will still anticipate if it explicitly or inherently discloses every limitation recited in claims.

3. Patentability/Validity -- Anticipation -- Identity of elements (§ 115.0704)

Examiner correctly found that functional limitations of application claim for conical dispensing top for popped popcorn were inherent in prior art conical spout for open-ended containers, and that functional limitations thus did not give claim patentable weight, since embodiment according to prior patent and embodiment depicted in figure in application have same general shape; examiner therefore correctly found that prior patent established prima facie case of anticipation.

4. Patentability/Validity -- Anticipation -- Identity of elements (§ 115.0704)

Applicant failed to overcome prima facie case of anticipation by showing that prior art conical spout for open-ended containers did not inherently possess functionally defined limitations in application claim for conical dispensing top for popped popcorn, since applicant's declaration, which asserted that conical top built according to figure in prior patent was too small to jam and dispense popcorn as recited in claim, does not specify dimensions of either dispensing top tested or popcorn used, since Board of Patent Appeals and Interferences found as factual matter that scaled-up version of top disclosed in prior patent would be capable of performing all functions recited in application claim, and since disclosure of prior patent is much broader than precise conical shape shown in patent's figure.

Case History and Disposition:

Page 1429

Appeal from the U.S. Patent and Trademark Office, Board of Patent Appeals and Interferences.

Patent application of Stephen B. Schreiber (device for dispensing popped popcorn). From decision sustaining examiner's final rejection of four claims in application, applicant appeals. Affirmed; Newman, J., dissenting in separate opinion.

Attorneys:

Joseph B. Taphorn, Poughkeepsie, N.Y., for appellant.

Joseph G. Piccolo, associate solicitor; Nancy J. Linck, solicitor; Albin F. Drost, deputy solicitor; and Karen A. Buchanan, associate solicitor, Patent and Trademark Office, Department of Commerce, for appellee.

Judge:

Before Newman, Plager, and Bryson, circuit judges.

Opinion Text**Opinion By:**

Bryson, J.

Stephen B. Schreiber appeals the decision of the United States Patent and Trademark Office's Board of Patent Appeals and Interferences sustaining a final rejection of four claims of Schreiber's patent application. We affirm.

Schreiber's patent application claims a device for dispensing popped popcorn. The device is conically shaped with a large opening that fits on a container and a smaller

Page 1430

opening at the opposite end that allows popped popcorn to pass through when the device is attached to a popcorn container and turned upside down. An embodiment disclosed in Schreiber's patent application is depicted below.

Schreiber filed a number of claims, and the examiner allowed many of the claims. Claims 1, 2, 14, and 15 were finally rejected, however, and those claims are the subjects of this appeal. Claim 1 recites:

A dispensing top for passing only several kernels of a popped popcorn at a time from an

open-ended container filled with popped popcorn, having a generally conical shape and an opening at each end, the opening at the reduced end allows several kernels of popped popcorn to pass through at the same time, and means at the enlarged end of the top to embrace the open end of the container, the taper of the top being uniform and such as to by itself jam up the popped popcorn before the end of the cone and permit the dispensing of only a few kernels at a shake of a package when the top is mounted on the container.

Claim 2 is similar to claim 1 but additionally recites that the top comprises a "means at the reduced end of the top to close-off the opening thereof." The other two claims, claims 14 and 15, depend from claims 1 and 2, respectively. Schreiber does not argue that claims 14 and 15 are patentable if claims 1 and 2 are not. Accordingly, because we affirm the rejection of claims 1 and 2, we need not address claims 14 and 15.

Claim 1 was rejected by the examiner under 35 U.S.C. Section 102(b) as being anticipated by Swiss Patent No. 172,689 to Harz. The Harz patent discloses "a spout for nozzle-ready canisters," which may be tapered inward in a conical fashion, and it states that the spout is useful for purposes such as dispensing oil from an oil can. The examiner explained that Harz discloses a conical dispensing top for an open-ended container and concluded that "the Harz top is clearly capable of dispensing popped popcorn." Figure 5 from Harz is depicted below.

Claim 2 was rejected by the examiner under 35 U.S.C. Section 103 as being unpatentable over the combination of Harz and U.S. Patent No. 3,537,623 to Fisher. The examiner stated that although Harz does not disclose a "means at the reduced end of the top to close-off the opening thereof," Fisher does. The examiner concluded that it would have been obvious to one of ordinary skill in the art to modify Harz in view of Fisher in order to "seal [] the container contents from contaminants."

In response to the patent examiner's rejections, Schreiber submitted a declaration stating that the conical dispensing top depicted in figure 5 of Harz was incapable of "jam [ing] up the popped popcorn before the end of the cone and permit [ing] the dispensing of only a few kernels at a shake of a package when the top is mounted on the container." The examiner did not enter that declaration in the record because he believed it had not been properly submitted. When Schreiber appealed to the Board, the Board remanded the case to the examiner to consider the declaration. On remand, the examiner considered the declaration but found that it did not provide sufficient information to support Schreiber's assertion that a dispensing top built according to Harz does not inherently possess the functionally defined limitations recited in the claims.

Schreiber again appealed to the Board, which upheld the rejections. The Board first found that Harz discloses every limitation recited in claim 1. Several of the recitations in the claims, the Board concluded, merely set forth the function and intended use of the top and therefore did not require any

structural feature other than those taught by Harz. The Board found that the structure disclosed by Harz is inherently capable of dispensing popcorn in the manner set forth in the claims, and that Schreiber's declaration did not provide enough details to prove that the structure disclosed by Harz is incapable of performing the claimed functions of Schreiber's invention.

In response to Schreiber's argument that the conical dispensing top disclosed in Harz is designed to dispense liquids such as oil, rather than solid items such as popcorn, and that it is not large enough to pass popcorn kernels, the Board noted that the Harz patent referred to the use of the claimed device for lubricating oil only as an "example," and found that one of skill in the art "would perceive the top of Harz as being of broader application." The Board further found that the dispensing top disclosed in Harz "is of a relative size and has a taper which would inherently permit popped popcorn kernels to jam up before the end of the cone and permit the dispensing of only a few kernels at a shake of the package" when the top is mounted on a popped popcorn container. Accordingly, the Board concluded that "all the limitations of claim 1 are found in Harz, either expressly or under the principles of inherency, and this claim is clearly anticipated thereby."

As for claim 2, the Board found that Fisher disclosed a means for closing off the smaller end of a conically shaped top and further found that it would have been obvious to one of ordinary skill in the art to provide a close-off mechanism for a top of the sort disclosed by Harz, to prevent dirt and other contaminating matter from entering the opening in the device. Schreiber appeals both of the Board's determinations.

II

Schreiber first argues that Harz does not anticipate claim 1. To anticipate a claim, a prior art reference must disclose every limitation of the claimed invention, either explicitly or inherently. See *Glaxo Inc. v. Novopharm Ltd.*, 52 F.3d 1043, 1047, 34 USPQ2d 1565, 1567 (Fed. Cir. 1995). Anticipation is an issue of fact, see *In re Graves*, 69 F.3d 1147, 1141, 36 USPQ2d 1697, 1700 (Fed. Cir. 1995); *Diversitech Corp. v. Century Steps, Inc.*, 850 F.2d 675, 677, 7 USPQ2d 1315, 1317 (Fed. Cir. 1988), and the question whether a claim limitation is inherent in a prior art reference is a factual issue on which evidence may be introduced, see *Continental Can Co. USA v. Monsanto Co.*, 948 F.2d 1264, 1268, 20 USPQ2d 1746, 1749 (Fed. Cir. 1991).

There is no dispute that the structural limitations recited in Schreiber's application are all found in the Harz reference upon which the examiner and the Board relied. Thus, to use the terms found in Schreiber's claim 1, Harz discloses a "dispensing top" that has "a generally conical shape and an opening at each end," and "means at the enlarged end of the top to embrace the open end of the container, the taper of the top being uniform." Schreiber argues, however, that Harz does not disclose that such a structure can be used to dispense popcorn from an open-ended popcorn container.

[1] Although Schreiber is correct that Harz does not address the use of the disclosed structure to dispense popcorn, the absence of a disclosure relating to function does not defeat the Board's finding of anticipation. It is well settled that the recitation of a new intended use for an old product does not make a claim to that old product patentable. See *In re Spada*, 911 F.2d 705, 708, 15 USPQ2d 1655, 1657 (Fed. Cir. 1990) ("The discovery of a new property or use of a previously known composition, even when that property and use are unobvious from prior art, can not impart patentability to claims to the known composition."); *Titanium Metals Corp. of Am. v. Banner*, 778 F.2d 775, 782, 227 USPQ 773, 778 (Fed. Cir. 1985) (composition claim reciting a newly discovered property of an old alloy did not satisfy section 102 because the alloy

itself was not new); *In re Pearson*, 494 F.2d 1399, 1403, 181 USPQ 641, 644 (CCPA 1974) (intended use of an old composition does not render composition claim patentable); *In re Zierden*, 411 F.2d 1325, 1328, 162 USPQ 102, 104 (CCPA 1969) ("[M]ere statement of a new use for an otherwise old or obvious composition cannot render a claim to the composition patentable."); *In re Sines*, 309 F.2d 488, 492, 135 USPQ 302, 305 (CCPA 1962) (statement of intended use in an apparatus claim failed to distinguish over the prior art apparatus); *In re Hack*, 245 F.2d 246, 248, 114 USPQ 161, 162 (CCPA 1957) ("the grant of a patent on a composition or a machine cannot be predicated on a new use of that machine or composition"); *In re Berner*, 174 F.2d 938, 942, 82 USPQ 49, 53 (CCPA 1949) ("no provision has been made in the patent statutes for granting a patent upon an old product based solely upon discovery of a new use for such product"). Accordingly, Schreiber's contention that his structure will be used to dispense popcorn does not have patentable weight if the structure is already known.

regardless of whether it has ever been used in any way in connection with popcorn.

[2] Schreiber makes the closely related argument that Harz does not anticipate claim 1 because Harz is non-analogous art to which one of ordinary skill in the art would not have looked in addressing the problem of dispensing tops for popped popcorn containers. However, the question whether a reference is analogous art is irrelevant to whether that reference anticipates. See *In re Self*, 671 F.2d 1344, 1350, 213 USPQ 1, 7 (CCPA 1982). A reference may be from an entirely different field of endeavor than that of the claimed invention or may be directed to an entirely different problem from the one addressed by the inventor, yet the reference will still anticipate if it explicitly or inherently discloses every limitation recited in the claims.

Schreiber further argues that the functional limitations of his claim distinguish it from Harz. In particular, Schreiber points to the recitation that the claimed top "allows several kernels of popped popcorn to pass through at the same time," and that the taper of the top is such "as to by itself jam up the popped popcorn before the end of the cone and permit the dispensing of only a few kernels at a shake of a package when the top is mounted on the container."

A patent applicant is free to recite features of an apparatus either structurally or functionally. See *In re Swinehart*, 439 F.2d 210, 212, 169 USPQ 226, 228 (CCPA 1971) ("[T]here is nothing intrinsically wrong with [defining something by what it does rather than what it is] in

drafting patent claims." Yet, choosing to define an element functionally, *i.e.*, by what it does, carries with it a risk. As our predecessor court stated in *Swinehart*, 439 F.2d at 213, 169 USPQ at 228:

where the Patent Office has reason to believe that a functional limitation asserted to be critical for establishing novelty in the claimed subject matter may, in fact, be an inherent characteristic of the prior art, it possesses the authority to require the applicant to prove that the subject matter shown to be in the prior art does not possess the characteristic relied on.

See also In re Hallman, 655 F.2d 212, 215, 210 USPQ 609, 611 (CCPA 1981); *In re Ludtke*, 441 F.2d 660, 663-64, 169 USPQ 563, 565-67 (CCPA 1971).

[3] The examiner and the Board both addressed the question whether the functional limitations of Schreiber's claim gave it patentable weight and concluded that they did not, because those limitations were found to be inherent in the Harz prior art reference. To begin with, contrary to the characterization in the dissent, nothing in Schreiber's claim suggests that Schreiber's container is "of a different shape" than Harz's. In fact, as shown above, an embodiment according to Harz (Fig. 5) and the embodiment depicted in figure 1 of Schreiber's application have the same general shape. For that reason, the examiner was justified in concluding that the opening of a conically shaped top as disclosed by Harz is inherently of a size sufficient to "allow [] several kernels of popped popcorn to pass through at the same time" and that the taper of Harz's conically shaped top is inherently of such a shape "as to by itself jam up the popped popcorn before the end of the cone and permit the dispensing of only a few kernels at a shake of a package when the top is mounted on the container." The examiner therefore correctly found that Harz established a *prima facie* case of anticipation.

[4] At that point, the burden shifted to Schreiber to show that the prior art structure did not inherently possess the functionally defined limitations of his claimed apparatus. *See In re Spada*, 911 F.2d at 708, 15 USPQ2d at 1658; *In re King*, 801 F.2d 1324, 1327, 231 USPQ 136, 138-39 (Fed. Cir. 1986); *In re Best*, 562 F.2d 1252, 1254-55, 195 USPQ 430, 433 (CCPA 1976). The Board found that Schreiber failed to do so, and we agree. Schreiber's declaration asserts that he built a conically shaped top according to figure 5 of Harz and that it was too small to jam and dispense popcorn as recited in the claim. The declaration, however, does not specify the dimensions of either the dispensing top that was tested or the popcorn that was used.

Moreover, the Board found as a factual matter that the top disclosed in figure 5 of the Harz

patent "is capable of functioning to dispense kernels of popped popcorn in the manner set forth in claim 1." Starting with Schreiber's assumption that Harz should be limited to use as an attachment to an oil can, the Board scaled figure 5 to the proportions necessary to fit the Harz container on top of a standard one-quart oil can, as Schreiber suggested in his request for reconsideration. After scaling the Harz figure in that manner, the Board found that the Harz dispenser would be capable of dispensing popcorn in the manner set forth in claim 1 of Schreiber's application.

The dissenting opinion incorrectly states that the Board "us [ed] Mr. Schreiber's invention as a template" in determining that the Harz dispenser anticipates Schreiber's invention. In fact, the Board simply scaled the dispenser illustrated in Harz figure 5 up

to the size necessary to fit a standard oil can, without changing the proportions of the figure in any way. (The top depicted in figure 5 of the Harz patent was obviously not intended to be a full-sized representation of the Harz invention, any more than the top depicted in figure 1 of Schreiber's application was intended to be a full-sized representation of his invention.) The portion of the dissenting opinion addressed to this point is therefore based on a false premise B that the prior art device was "altered by the Board and then found to anticipate a different invention in whose image it was recreated." The Board's finding that the scaled-up version of figure 5 of Harz would be capable of performing all of the functions recited in Schreiber's claim 1 is a factual finding, which has not been shown to be clearly erroneous. On this ground alone, the Board's anticipation ruling must be upheld.

In any event, however, it is not enough for Schreiber to contend that a top built according to the proportions of figure 5 of Harz is incapable of performing the jamming and dispensing functions. The figures from Harz were provided only as "design examples of the invention"; the disclosure of the Harz patent is thus much broader than the precise conical shape disclosed in figure 5. Moreover, contrary to Schreiber's suggestion, the structure disclosed in Harz is not limited to use as an oil can dispenser. While that use is given as the principal example of the uses to which the invention could be put, nothing in the Harz patent suggests that the invention is in any way limited to that use. In sum, Schreiber's declaration fails to show that Harz inherently lacks the functionally defined limitations recited in claim 1 of the application.

Accordingly, we agree with the Board that Schreiber has failed to rebut the prima facie case of anticipation identified by the examiner. The Board's factual finding on the issue of anticipation is therefore affirmed.

III

Schreiber also challenges the Board's finding that claims 2 and 15 are unpatentable under 35 U.S.C. Section 103 as being obvious over the combination of Harz and Fisher. Schreiber argues that the combination of Harz and Fisher does not disclose all the limitations of claim 2 because neither Harz nor Fisher discloses the functionally defined features of the top. That argument is without merit because, as we have already noted, Harz discloses those functionally defined limitations.

Schreiber also argues that Fisher does not provide the function that the "means for closing off" in Schreiber's application provides. The functions Schreiber cites B enabling a person to carry a popped-popcorn package in a non-upright position without spillage, keeping the popcorn warm, and facilitating the mixing of ingredients B are not recited as part of the means-plus-function clause in claim 2. Accordingly, those functions cannot impart patentability to the claim.

Schreiber further argues that Fisher is non-analogous art because Fisher relates to pouring oil from an oil can whereas Schreiber's invention relates to popcorn dispensing. That argument was not raised before the Board and we therefore decline to consider it for the first time on appeal. Even if we were to consider that argument, however, we note that Schreiber acknowledges in the specification that the prior art pertinent to his invention includes patents relating to dispensing fluids. Schreiber therefore may not now argue that such patents are non-analogous art. See *Constant v. Advanced Micro-Devices, Inc.*, 848 F.2d 1560, 1570, 7 USPQ2d 1057, 1063 (Fed. Cir. 1988); *In re Fout*, 675 F.2d 297, 300, 213 USPQ 532, 535 (CCPA 1980); *In re Wood*, 599 F.2d 1032, 1036, 202 USPQ 171, 174 (CCPA 1979); *In re Nomiya*, 509 F.2d 566, 571, 84 USPQ 607, 611-12 (CCPA 1975). Accordingly, we find no error in the Board's determination that claims 2 and 15 would have been obvious. *AFFIRMED*.

Newman, J., dissenting.
I respectfully dissent. The panel majority affirms the PTO position that the express limitations of the claims are irrelevant when dealing with a rejection on the ground of "anticipation." The court thus departs from the rules of claim interpretation on which we have placed so much weight. The Federal Circuit has held, over and over, that every claim limitation is important and

none can be ignored -- and now proceeds to ignore several express limitations. Thus the panel incongruously holds that a claim that requires, explicitly and precisely, a container of popcorn and a dispenser that passes only a few kernels of popcorn before jamming, is "anticipated" by an oil can of a different shape as illustrated in a reference that neither shows nor suggests a container filled with popcorn or the jamming of the dispenser upon dispensing the popcorn. I feel for those who tread the arcane path of patent soliciting, for this court's insistence on the

importance of the limitations in the claims seems to have lost its way.

A

Schreiber's claims 1 and 14 are representative:

1. A dispensing top for passing only several kernels of a popped popcorn at a time from an open-ended container filled with popped popcorn, having a generally conical shape and an opening at each end, the opening at the reduced end allows several kernels of popped popcorn to pass through at the same time, and means at the enlarged end of the top to embrace the open end of the container, the taper of the top being uniform and such as to by itself jam up the popped popcorn before the end of the cone and permit the dispensing of only a few kernels at a shake of a package when the top is mounted on the container. 1/4. A package consisting of a container having popped popcorn and having an open end and embracing thereat a dispensing top according to claim 1.

The Board held that it is irrelevant that the Schreiber claims are limited to a container filled with popped popcorn with the additional limitation of dispensing a few kernels at a time before the dispenser jams up. No popcorn container or dispenser was cited by the PTO, and no similar claim limitations were cited by the PTO. These claim limitations can not be ignored. See *Perkin-Elmer Corp. v. Westinghouse Elec. Corp.*, 822 F.2d 1528, 1532, 3 USPQ2d 1321, 1324 (Fed. Cir. 1987) (the court can not ignore a plethora of meaningful limitations). Patentability is determined for the invention as claimed, with all its limitations. It is improper to delete explicit limitations from the claim in order to find the residue in the prior art.

"That which infringes if later anticipates if earlier." *Polaroid Corp. v. Eastman Kodak Co.*, 789 F.2d 1556, 1573, 229 USPQ 561, 574 (Fed. Cir. 1986) (citing *Peters v. Active Mfg. Co.*,

129 U.S. 530, 537 (1889)). It is inconceivable that this or any court would find Mr. Schreiber's claims to this popcorn dispenser infringed by the oil can of the Harz reference. The claim limitations that the container is filled with popped popcorn and that only a few kernels of popcorn are released at a time could not be ignored in an infringement action, and they are not properly ignored in a patentability action.

The Board, using Mr. Schreiber's invention as a template, rescaled the prior art and filled the oil can with popcorn. This exercise of hindsight is not "anticipation." The law of anticipation requires that the same invention, with all the limitations of the claims, existed in the prior art. See *Richardson v. Suzuki Motor Co.*, 868 F.2d 1226, 1236, 9 USPQ2d 1913, 1920-21 (Fed. Cir. 1989) ("anticipation" requires that the identical invention is described in a single prior art reference). A prior art device can not be altered by the Board and then found to anticipate a different invention in whose image it was recreated.

In responding to the PTO's rejection, Mr. Schreiber made an actual conical top according to the Harz oil can's proportions, and reported that the popcorn did not behave as in his device. The Board then proposed that Mr. Schreiber had erred in determining the diameter of the opening, and postulated that with the appropriate opening the Harz oil can might behave as does Mr. Schreiber's container. Mr. Schreiber says this is incorrect. I say it is irrelevant. See, e.g., *Richardson*, 868 F.2d at 1236, 9 USPQ2d at 1920 (every element of the claim must be shown in the reference, including all limitations); *In re Paulsen*, 30 F.3d 1475 [31 USPQ2d 1671] (the reference must describe the claimed invention sufficiently to place it in the possession of a person of ordinary skill in the field).

Mr. Schreiber's popcorn dispenser is not described in the prior art. Statements in the claims that define and limit the device are material limitations, for purposes of infringement and for purposes of distinguishing from the prior art. See, e.g., *Rove v. Dror*, 112 F.3d 473, 478-79, 42 USPQ2d 1550, 1553-54 (Fed. Cir. 1997) (the field of the invention as stated in a Jepson-type claim limits the invention); *Diversitech Corp. v. Century Steps, Inc.*, 850 F.2d 675, 677-78, 7 USPQ2d 1315, 1317 (Fed. Cir. 1988) (limitations stated in the preamble limit the claimed invention); *In re Stencel*, 828 F.2d 751, 754-55, 4 USPQ2d 1071, 1073 (Fed. Cir. 1987) (function stated in claim distinguishes from prior art). The rejection for lack of novelty is simply incorrect.

In *Warner-Jenkinson Co. v. Hilton Davis Chem. Co.*, 117 S. Ct. 1040 [41 USPQ2d 1865] (1997) the Court stressed the importance of claim limitations. The cases cited by the panel

majority relate to the discovery of a new use of a known composition or device, and hold that the discovery of that use does not render patentable that which is already known. However, Schreiber's device is not known, but is new, and the claims are explicitly so limited. See *Corning Glass Works v. Sumitomo Elec. U.S.A., Inc.*, 868 F.2d 1251, 1255-57, 9 USPQ2d 1962, 1965-66 (Fed. Cir. 1989) ("To read the claim in light of the specification indiscriminately to cover all

types of optical fibers would be divorced from reality."); *W.L. Gore & Assoc., Inc. v. Garlock, Inc.*, 721 F.2d 1540 [220 USPQ 303] or 842 F.2d 1275 [6 USPQ2d 1277] (anticipation can not be based on conjecture). The claimed popcorn dispenser having a novel structure and function, whereby the container is filled with popcorn and after a few kernels of popcorn are released the dispenser jams up, is not in the cited prior art. The explicit claim limitations must be considered in determination of anticipation, just as they would be considered in construing the claims for the purpose of determining infringement. They can not be ignored. Since no prior art shows this device, it can not be "anticipated" as lacking novelty.

B

The panel majority suggests that it would be "inherent" to use the oil can as a popcorn dispenser. An inherent disclosure, to be invalidating as an "anticipation," is a disclosure that is necessarily contained in the prior art, and would be so recognized by a person of ordinary skill in that art. *Continental Can Co. USA, Inc. v. Monsanto Co.*, 948 F.2d 1264, 1268-69, 20 USPQ2d 1746, 1749-50 (Fed. Cir. 1991). "Inherency" charges the inventor with knowledge that would be known to the art, although not described. Inherency is not a matter of hindsight based on the applicant's disclosure; the missing claim elements must necessarily be present in the prior art.

The authority cited by the majority, relating to claiming a known composition or device based on discovery of a new use, is inapt. It is of course correct that the discovery of a new use of a known composition or device does not render that composition or device patentable per se. The reason, however, is not "inherency"; it is that the composition or device is already known to the public, and can not be removed from the public. (The new use can of course be claimed as a

Full Text of Cases (USPQ2d)

method of use.) In this case, however, Mr. Schreiber has created a new device, not previously known to the public, and has claimed his new device with explicit limitations that distinguish it from previously known devices.

In passing, I also observe that the majority errs in stating that advantages not recited in the claim can not impart patentability to a new device. The advantages of an invention are often relied on to support patentability; whether they are included in the claim depends on a variety of factors, and is not the subject of a rigid rule.

The issue in this case is anticipation; that is, novelty. Since the claimed invention is not described in a single prior art reference, it is not "anticipated."
